

The Importance of Including Surge Protectors like Armada

- Surges generated by equipment (motors, variable speed drives, etc.) can cause cumulative damage to the electrical network.
- Climatic events (lightning) or anomalies in the public grid can lead to destructive surges for electrical installations.
- Combines protection against transient surges and atmospheric discharges, reducing the need for multiple devices.
- Meets IEC 61643-11 and UL 1449 standards to ensure optimal performance in all installations.
- Ideal for industrial, commercial, and residential infrastructures.
